

# North Carolina's Next Generation Networks

The Opportunity for World-Class Broadband & the NCMGN Model

February 20th, 2016

Marc Hill  
Vice Chancellor for IT & CIO  
NC State University

## Bandwidth is THE Critical Infrastructure for the Future

- Bandwidth and high capacity access is the nation's advanced high growth and electricity
- US is 14th in broadband access globally
- US students gain 10% for every 1% increase in high-speed internet
- High-tech industry needs diverse bandwidth for all scenarios
- Most jobs require an online application, students to file
- Digital literacy is critical for "knowledge workers"
- Need on digital training of "the future" in the future of business

How fast is Google?

2020

Year	Download Speed (Mbps)	Upload Speed (Mbps)
2015	~10	~5
2016	~15	~8
2017	~20	~10
2018	~25	~12
2019	~30	~15
2020	~35	~18

## Best Connected State in the US

Best Connected State in the US  
Source: Light Reading

## SEF Goals and Objectives

- Improve broadband access for all North Carolinians
- Support economic development and job creation
- Enhance educational opportunities
- Support public safety and emergency services
- Improve healthcare delivery
- Support government operations

## What are the goals for the SEF?

## What are the goals for the SEF?

## Risk to Community Resilience

Risk	Impact
Power Outage	Disruption of services
Network Congestion	Slower service
Security Breach	Loss of data
Service Disruption	Loss of revenue

## Next Steps

- Finalize the SEF
- Develop a funding strategy
- Identify and secure funding sources
- Develop a governance structure
- Implement the SEF

Working Committee Contributions

- Local and state support of the SEF
- Identify and secure funding sources
- Develop a governance structure
- Implement the SEF

## Possible Next Opportunities

- Identify and secure funding sources
- Develop a governance structure
- Implement the SEF

## Conclusion

There is a significant opportunity for North Carolina to become a world-class broadband state. The SEF provides a clear path forward.

Questions?

# North Carolina's Next Generation Networks

**NC STATE**

*The Opportunity for  
World-Class Broadband &  
the NCNGN Model*

NETWORKS  
**NGN**

# Bandwidth is THE Critical Infrastructure for the Future

- Bandwidth and high speed access is the modern equivalent of highways and electricity
- US is 14th in broadband access globally
- US residents gets half the speed for twice the price
- High Tech industry requires diverse bandwidth for site selection.
- Most jobs require an online application, students for HW
- Digital literacy is critical for “knowledge workers”
- Work and digital sharing of “big data” is the future of business

## THE TOP FOURTEEN

\*Data courtesy of Akamai's State Of The Internet Report Q2 2014

Average Broadband

How fast is gigabit ?

**SO WHAT DOES 1GB LOOK LIKE?**

 2 HOURS OF STREAMING VIDEO

 200 SONGS

 1,000 DIGITAL BOOKS

 4,000 FACEBOOK PROFILES

 50,000 EMAILS

# 2020

## SO WHAT DOES 1GB LOOK LIKE?

**2 HOURS OF STREAMING VIDEO**

**200 SONGS**

**1,000 DIGITAL BOOKS**

**4,000 FACEBOOK PICS**

**50,000 EMAILS**

## AND WHAT WILL BE NEXT?

**NETWORKS NEED TO BE READY FOR...**

**CLOUD COMPUTING**

**'ALWAYS ON' SOCIAL GAMING**

**VIDEO CALLING EVERYWHERE AND ANYWHERE**

**3D MOBILE VIDEO**

**FRIDGES, CARS, FLOWERPOTS, THE INTERNET OF THINGS**

# Next Gen Network: Applications

eGovernment	Health Care	Public Safety	Business/ Economic Dev	Education
Government to Consumer (G2C)	Aging in place Telehealth	Mobile alerts E911	Retail marketing Financial services	Distance learning –thru telepresence and visualizations
Government to Business (G2B)	Remote Surgery	Air quality monitoring	State of the art modeling, animation and design	Higher education research exchange platform
- Communications -Information -Registrations -Fees and taxes -Civic engagement	Databased, pre-surgery Genetic Sequencing analysis	Transit and traffic monitoring On-demand local information Cutting edge police investigative tools	Advanced manufacturing Entertainment	

# **Gig.U:** *The University-Community Next Generation Innovation Project*

In 2011, 37 leading research universities and their local communities formed Gig.U

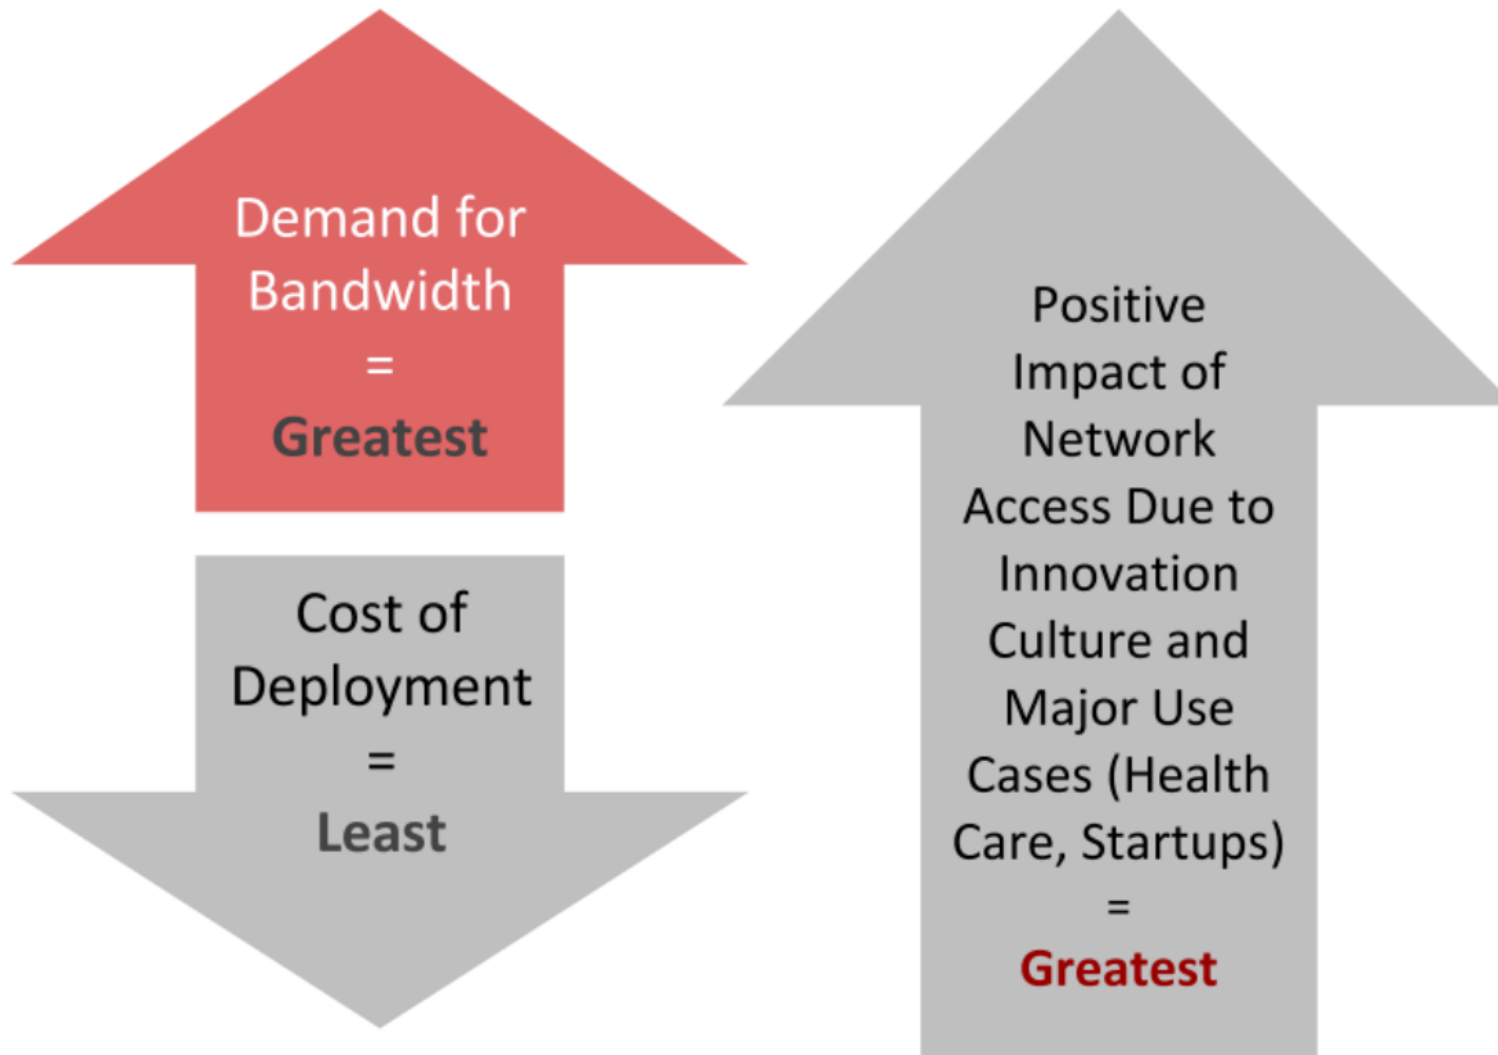

***Mission:*** Accelerate the deployment of world-leading, next generation networks in the United States

***Strategy:*** Use university communities as test beds for the acceleration of deployment of ultra-high speed network services and applications

# Gig.U: Focus on University Communities

University communities are incubators of networked-based innovations

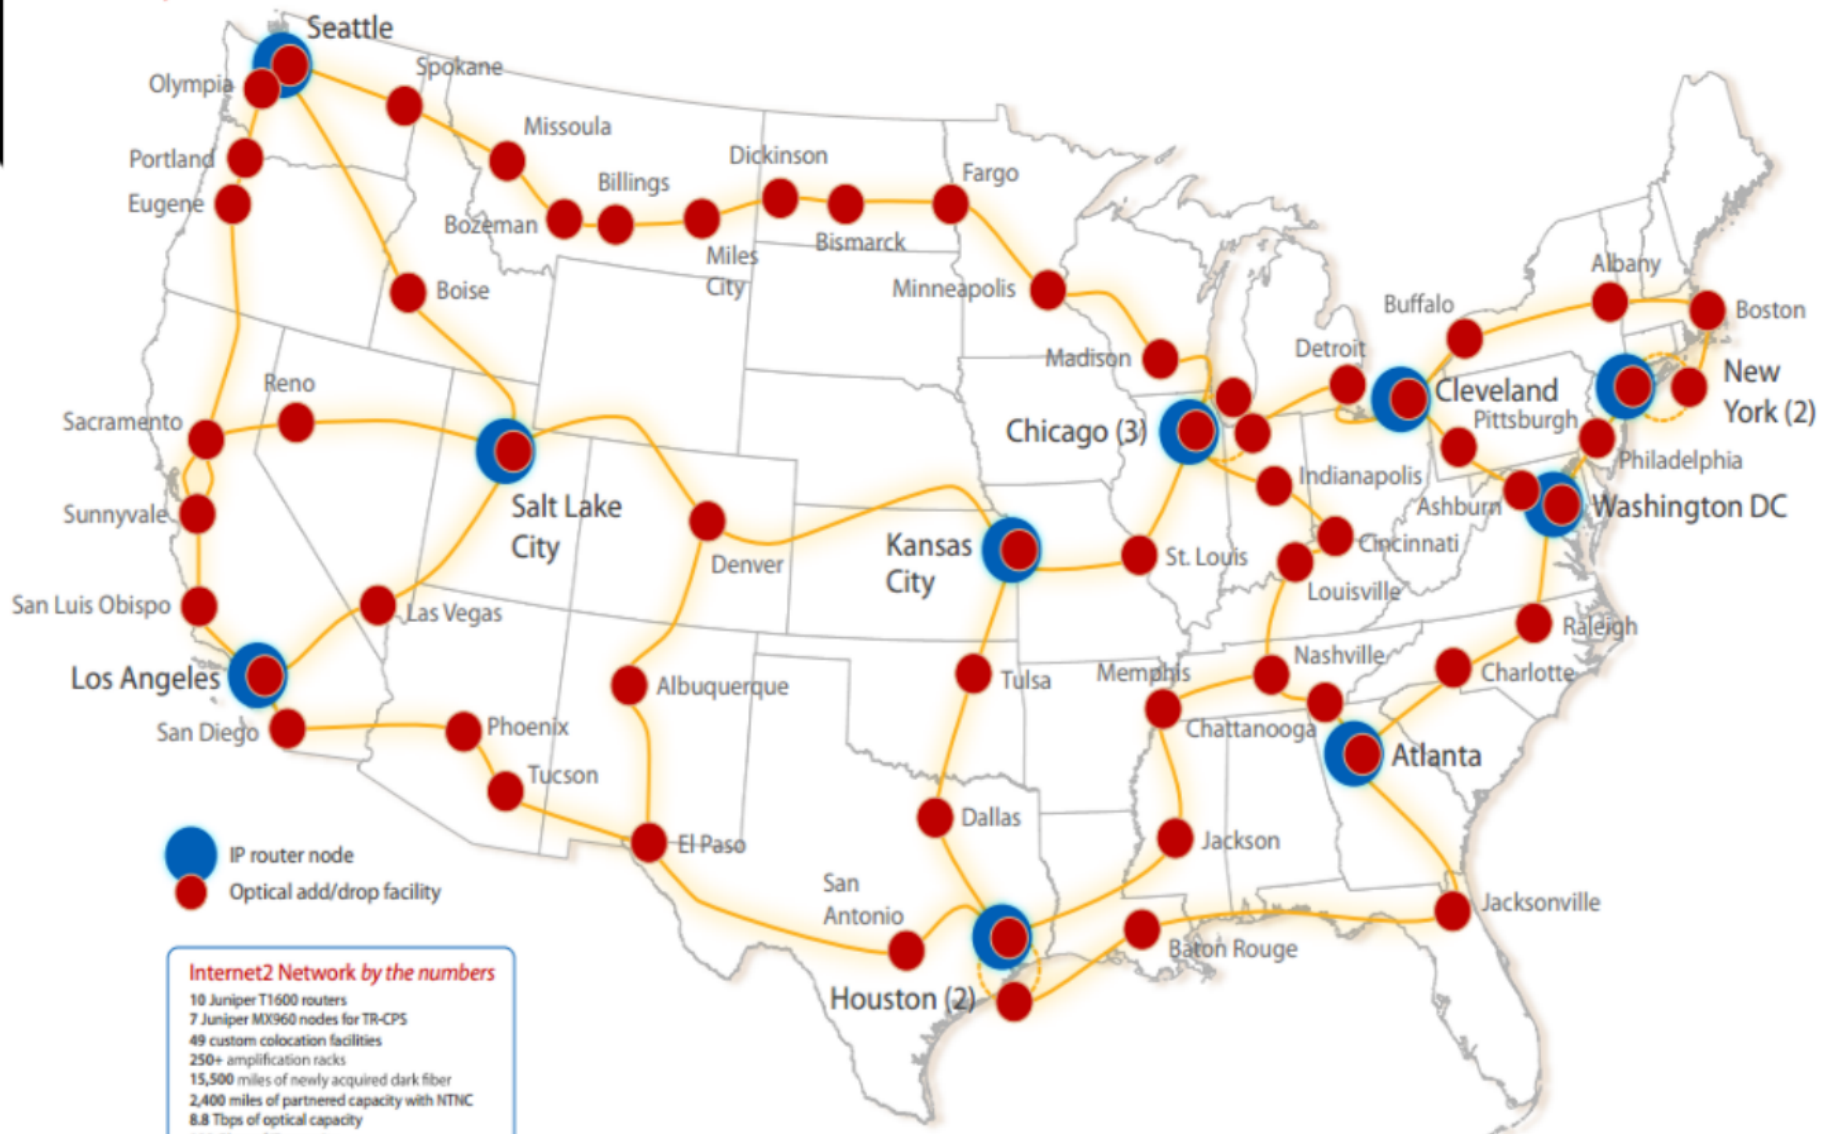

# Internet 2 National R&E Network

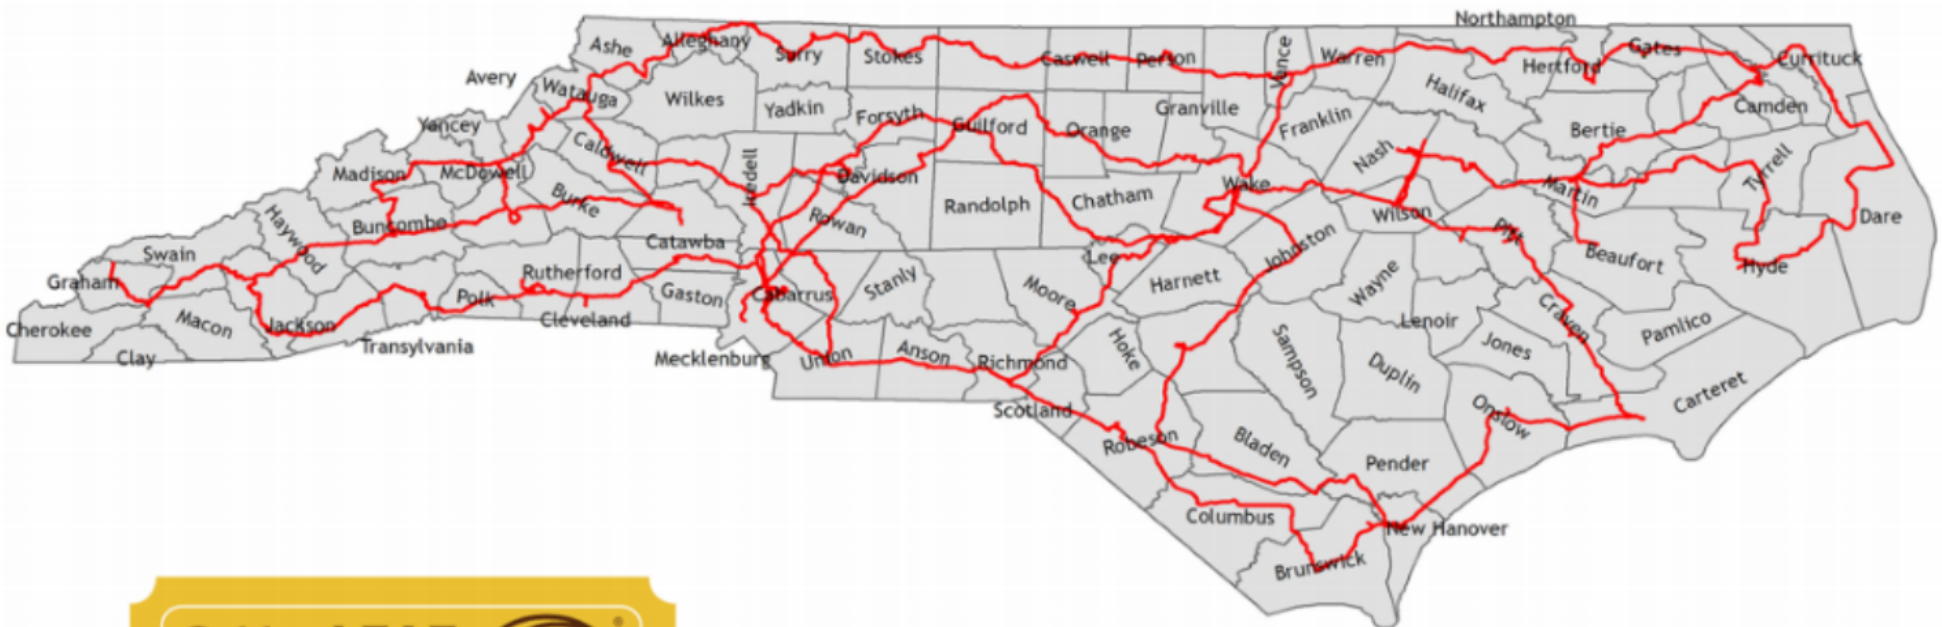

## Internet2 Planned 100 Gigabit Infrastructure Topology

Draft - Last updated 27 Mar 2012

# Best Connected State in the US

## Golden LEAF Rural Broadband Initiative

# NCNGN – A Regional Gig.U Initiative

- Focused on economic development and digital divide
- Sought private sector companies willing and able to deploy and operate local 1 gigabit wired and 100 Mbps wireless next generation networks
- Six municipalities, four universities partnered:
  - Chapel Hill, Carrboro, Cary, Durham, Raleigh, Winston/Salem
  - Duke, NC-State, UNC-CH & Wake Forest
- Started collaboration reaching out to local chambers of commerce
- Received support from many local businesses (letters)
- Worked with Triangle-J Council of Governments (TJCoG)
  - Group that promotes collaboration of municipalities
- Used an open RFP process to attract widest possible solutions and vendors
- 8 submissions, evaluated & negotiated (result: AT&T)

# RFP Goals and Objectives

Sought vendors or coalitions of vendors to achieve the following:

- Create a gigabit, fiber network to foster innovation, drive job creation, stimulate economic growth, and serve new areas of development in the community
- Provide an open access architectural framework that maximizes wholesale and retail service delivery and competition
- Provide a flexible menu of optional retail services
- Use public-private assets to reduce the digital divide, enhance workforce knowledge and skills, promote economic development, enhance access for anchor institutions, and serve other targeted social purposes identified by the participating municipalities
- Provide high speed internet service over a wired or wireless network at a substantial discount from current market prices

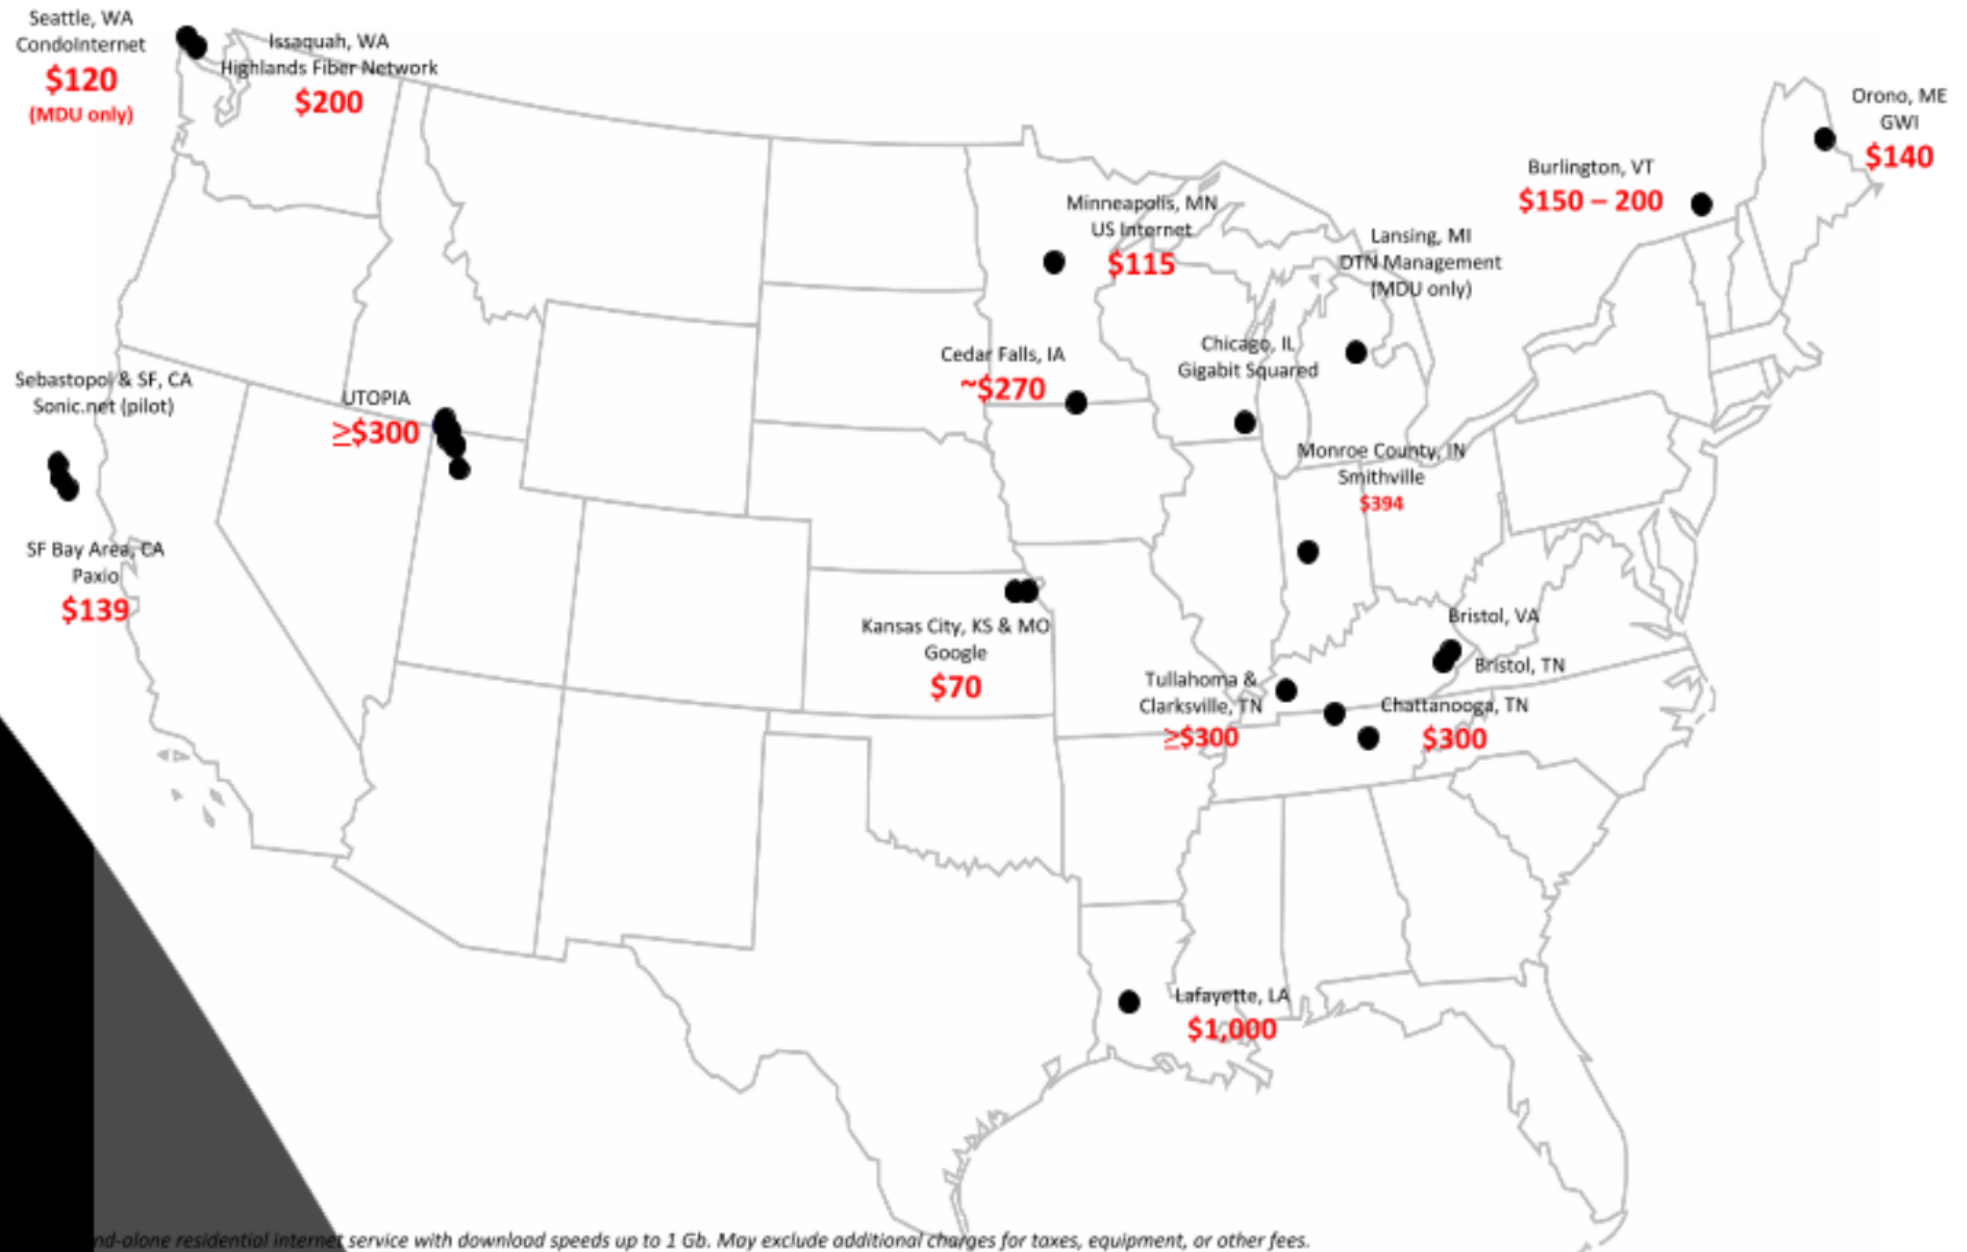

# Collaboration for Benefit of Entire Community

- Digital inclusion is necessary to realize the network's full potential and maximize economic benefits
  - Requires concerted community effort
- Providers can help by providing access to discounted services, but that's not enough, may also need:
  - Additional support to lower cost of service
  - Free or discounted hardware
  - Training
  - Targeted awareness and outreach efforts
  - Relevant curriculum and content
- No one size fits all strategy for digital inclusion

# Common Attributes Others Could Adopt

- This was a municipality effort, universities were facilitators
- Business community, community leaders and municipal administration are key stakeholders
- Municipalities need to develop:
  - Available assets (fiber, space rental, rights of way, permitting support, connection to utilities, legal support)
  - Demand aggregation (businesses, community anchors, business map, municipal locations, community locations, etc)
  - Agreed upon common pricing, unified negotiation & simplified contracting
- Need a strong & representative core team

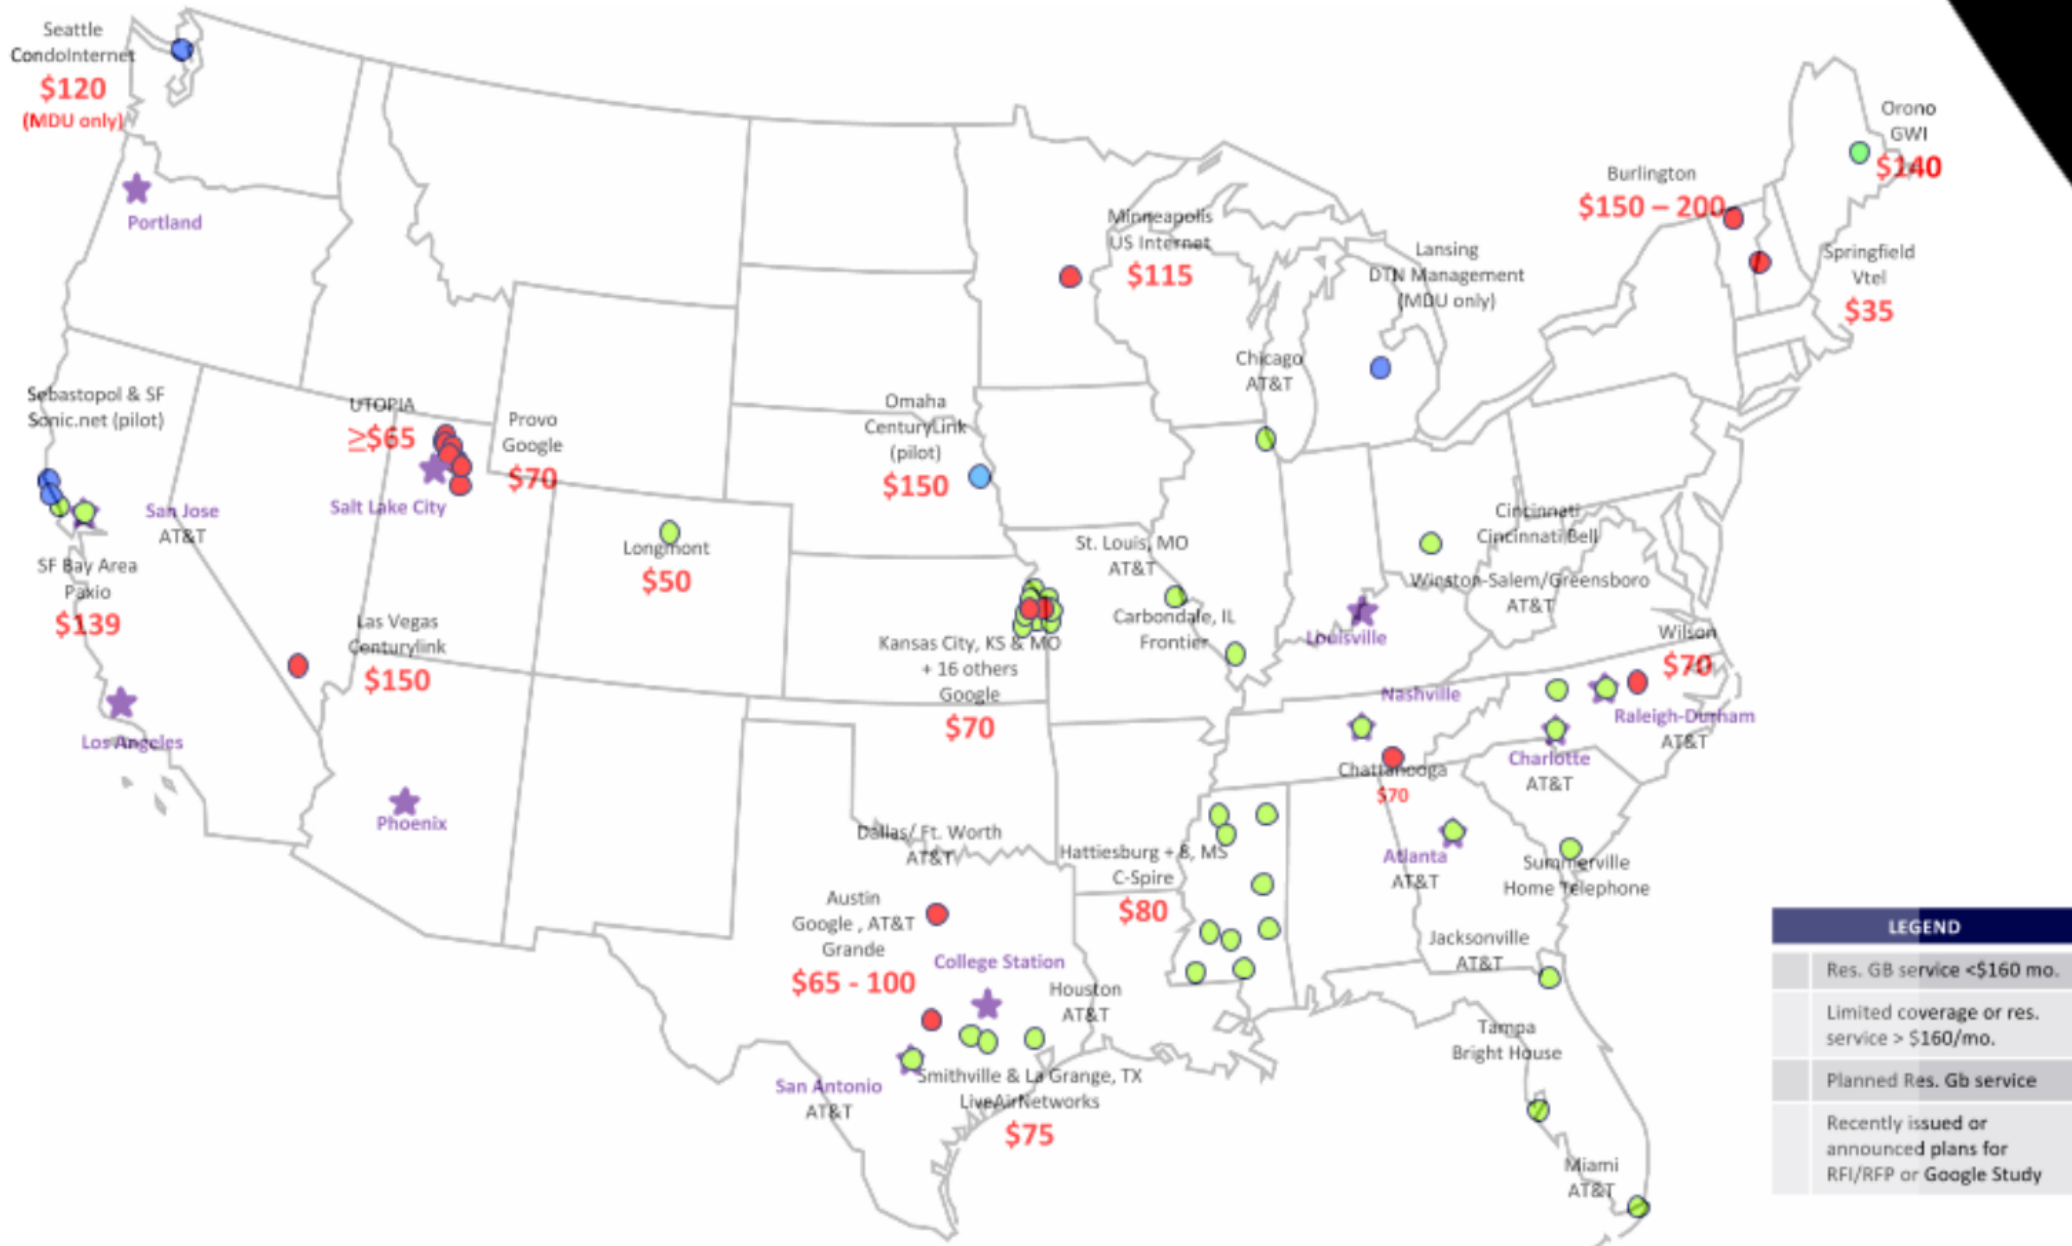

# Other communities in the gigabit game Feb. 2013

stand-alone residential internet service with download speeds up to 1 Gb. May exclude additional charges for taxes, equipment, or other fees.

# Other communities in the gigabit game now

Pricing for stand-alone residential internet with download speeds up to 1 Gbps. Prices as advertised on provider websites or other publicly available sources as of 12/11/2013. May exclude additional charges for taxes, equipment, or other fees. Does not reflect plans for Anchorage, AK and cities throughout NC announced by GCI and RST Fiber, respectively.

# Keys to Community Success

## ***Build Local Support from...***

- Research Universities
- Hospitals
- Major Foundations
- Start-up Communities
- Corporations
- Local ISPs
- Incumbent ISPs
- Complimentary policy organizations or local advocates in education, energy, etc.
- Public Utility System or Company
- Developers
- Surrounding municipalities (for a regional approach, if applicable)

## ***Centralize Information on Existing Fiber Assets from...***

- Public Safety
- Hospitals
- Research Universities
- Transportation Authorities
- Other parts of the city government with maps of fiber holdings

## ***Be Aware of History...***

- Has there been previous Broadband Technology Opportunity Program Funding in your area - either through adoption or infrastructure work?
- What does connectivity look like in your city? What is the nature of your digital divide?
- Have there been previous successful connectivity projects?
- Have there been previous failed connectivity projects?
- Has your state passed legislation banning or limiting new public or partially public networks?

## ***Leverage External Resources...***

- CLIC - The Coalition for Local Internet Choice
- Next Century Cities
- U.S. Economic Development Administration
- National Telecommunications & Information Association
- Fiber to the Home Council
- State-level political champions
- State Broadband Initiative (SBI)
- Federal connectivity grants (e.g. NTIA, Department of Agriculture's Rural Utilities Service)
- Private grant programs (e.g. One Community's Big Gig Challenge)

# Next Steps

- Form Local Steering Committee (see draft charter)
- Select a Project Manager
- Collect and map assets by city & location
- Collect a potential "subscriber" density map
- Create "Broadband Effectiveness" committee (develop local uses, outreach, education, etc)
- Update & complete the RFP

# Steering Committee Considerations

- Land of Sky for support of collaboration
- One representative for each key community
- Small and effective structure (<10 members)
- Agreement on outcomes (partial, one or multiple vendors, timeline, etc)
- Re-use of NCNGN efforts to save time

# Possible Asset Opportunities

- **Assets:**

- Pole access
- Conduits
- Existing fiber?
- Space for rental ("huts")

- **Support:**

- Rights of way
- Dig once strategy
- Permit process
- Legal

- **Opportunities:**

- Locations needed for municipal connections? (fire stations, libraries, offices)
- Community centers & libraries
- MDU (under served areas & housing)

## **Remember:**

This is a county & municipal  
economic development effort,  
not a technology deployment!

## **Questions?**
